

# Photographic observation of the park

The photographic observatory of landscapes of the Forêt d'Orient Regional Nature Park has for objective to constitute a fund of photographic series. The shots taken in an identical way at regular intervals allows the analysis of the mechanisms of transformation of the spaces, and the actors who are the reason for it, in order to orient the evolution of landscapes favourably. It is one of the 20 French sites of the photographic observatory of landscapes established by the Ministry of Regional Development and the Environment . The Park confided to M. Jacques Vilet, artist photographer, the photographic mission. To valorise this work and to discover some of the wealth hidden in the territory of the Park, we offer you here several photos in black and white of this observatory of landscape.
