Ospreys are large majestic birds of prey with a fascinating ecology and an incredible watch-ability!

A century ago ospreys in the UK were hunted to extinction. Forty years later they began to make a come back and since then we have learnt a lot more about them by studying rather than shooting them. The more we learn about this amazing species the more tools we have in the tool box to help them recover from world wide declines.

Explore this area of the website to learn more about the diet, migrations, habitat and history of ospreys.
