The main objective of a software company should be to develop a quality piece of software for the customers and make it as simple as possible to use by as many people as possible and to be compatible with as many devices as possible. The people, choose an application to the detriment of another, firstly based on utility, secondly on speed and third on design, although sometimes a well-designed app could be preferred over another when there's not a big difference between their speed. I think it's important to every piece of soft to have documentation pinned to it, with a how-to explanation. I do that with every software, with the help of Docsie (find here), which was created especially for documenting.
