1. The syntax for the Round function is Round(number, Num_digits)

a. **Number:** This would be the number in need of rounding

b. **Num_digits:** This would be the number of digits to be rounded off

2. The examples show different function scenarios using varying Num_digits
- a. Notice, specifying a negative number will round off number **before** the decimal point
 - b. Notice, specifying a positive number will round off numbers **after** the decimal point
